2021 Annual Drinking Water Quality Report

NORTHEAST JEFF. DAVIS WATER ASSOCIATION

PWS ID # 330007 JUNE 10, 2022

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from two wells that draw groundwater from the Miocene Series Aquifer.

Our source water assessment has been compiled by the Mississippi Department of Environmental Quality and a copy of this assessment is available at our office.

I'm pleased to report that our drinking water meets all federal and state requirements.

This report shows our water quality and what it means.

If you have any questions about this report or concerning your water utility, please contact Bobby Selman at 601-455-2791. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of every month at 5:00 p.m. at our office in Prentiss, Ms.

Northeast Jeff. Davis Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1" to December 31", 2021. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter- one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

Action Level- the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level- The Maximum Allowed≅ (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal- The Goal≅(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

: -				TEST	RESULTS			
Contaminant	Violatio n Y/N	Date Collected	Level Detecte d	Range of Detects or # of Samples Exceeding MCI/ACL	Unit Measureme nt	MCLG	MCL	Likely Source of Contamination
Disinfectants & D			disinfectant	is necessary for o	control of micro	bial contam	inants.)	
Chlorine (as CL2)	N	2021	1.20 (RAA) Running Annual Average	1.10-low 1.26-high	ppm	4.0	4.0	Water additive used to control microbes

9.Sodium.	N	2019*	1900	NA	ppb		250000	Erosion of Natural Deposits;Leaching
10. Barium	N	3/25/2019*	0.0193	0	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
17.Lcad	N	7/07/2020*	0.0	0	ppb	0	AL-15	Corrosion of household plumbing systems, erosion of natural deposits
19.Nitrate(as Nitrogen)	N	3/09/21	0.292	0	ppra	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion on natural deposits

*Most Recent

Inorganic Contaminants:

- (9) Sodium. Likely Source of Contamination-Road Salt, Water Treatment Chemicals, Water Softeners, and Sewage Fiffuents
- (10) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.
- (17) Lead Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span or learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.
- (19) Nitrate. Infants below the age of six months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue-baby syndrome.

(9) Sodium. Likely Source of Contamination-Road Salt, Water Treatment Chemicals, Water Softeners, and Sewage Effluents

(10) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.

(17) Lead Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span or learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

(19) Nitrate. Infants below the age of six months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue-baby syndrome.

****** Additional Information for Lead******

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. North East Jeff. Davis Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agencys Safe Drinking Water Hotline at 1-800-426-4791. Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Please call our office if you have questions.

We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our childrens future.

This CCR Report will not be delivered to you by mail but you may obtain a copy at the Northeast Jeff. Davis office.

If you have any questions about this report or conserving your water utility, please contact Bobby Selman et 601-455-2791. We want our valued outcomers to be informed about their water utility if you want to learn more, please attend any of our regularly scheduled meetings. They are hald on the second Monday of every month et 5:00 p.m. at our office in Prents, N. Meer according to Federal and State Issue. Northwest Jeff: Davis Water Association routinely monitors for constituents in your drinking water according to Federal and State Issue. This table shows the results of our monitoring for the period of January 1° to December 31°, 2021. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorpatic and organic chemicals, and redisable substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk. In this table you will find many terms and abbreviations you might not be familiar with. To tail you better understand these terms we've provided the following definitions:

Nam-Deleted (RID) - laboratory analysis indicates that the constituent is not present.

Parts per million (sport) of Milligrans per liber (nspf) - one pert per million corresponds to one minute in two years or a single ponny in \$10,000, the Parts per dillion (spb) or Million (s in \$10,000,000,000.

Peric per quadriblen (ppg) or Picograms per litter (picogram/l) - one part per quadriblen corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000. Picocuries per riter (pCPL) - picocuries per liter is a measure of the rediscolonity in water.

Action Level - the concentration of a contaminant which, if expected, higgest treatment or other requirements which a water system must follow.

The attractive Trachologue (TT) - A treatment fechinique is a required process intended to reduce the level of a contaminant in definition mater.

Maximum Contaminant Level - The Advantment Allowed (MAC) is the highest level of a contaminant that is allowed in definiting water. MCLs are set as close to the MCLCs as fewer as close to the MCLCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as contaminent Level float - The Advantage MCCs are fewer as a contaminant Level float - The Advantage MCCs are fewer as a contaminant Level float - The Advantage MCCs are fewer as a contaminant Level float - The Advantage MCCs are fewer as a contamination of the fewer as a contamination of the fewer of a contamination of the fewer as a contamination of the fewer
